Data Modelling and Form Design

Aim:

To design and develop a Job Application Form using Zoho Creator by creating a structured form, applying appropriate validations, and generating a report for managing loan applications.

Theory :

Data modelling and form design involve organizing data into suitable fields and sections for efficient collection, validation, and management. In Zoho Creator, forms are built using a variety of specialized field types—such as Name, Address, Phone, Email, URL, Dropdown, Radio, Number, Multi-Select, Date, Time, Multi Line, and Checkbox—to enforce data integrity and improve user experience.

In this experiment, a **Job Application Form** is designed to capture candidate profiles, digital presence, professional background, availability, and onboarding consent. The form is structured into four logical sections:

- **Section A — Personal Details:** Gathers primary candidate information including **Candidate Name** (*Name* field), **Current Address** (*Address* composite field), and **Contact Number** (*Phone* field).
- **Section B — Contact & Online Presence:** Captures digital communication channels through **Email Address** (*Email* field) and professional profile links via **LinkedIn / Portfolio URL** (*URL / Single Line* field).

- **Section C — Job & Experience Details:** Records role-specific attributes such as **Department Applied For** (*Dropdown* field), **Employment Type Preferred** (*Radio* field), **Years of Experience** (*Number* field), **Key Skills** (*Multi-Select / Dropdown* field), and **Available Joining Date** (*Date* field).

- **Section D — Interview Scheduling & Consent:** Manages logistics and candidate confirmation through **Preferred Interview Time** (*Time* field), a **Cover Letter** (*Multi Line* field), and mandatory **Background Verification Consent** (*Checkbox* field).

Procedure

1. Open Zoho Creator and create the **Job** application.

2. Create the form named **Job_Application_Form**

3. Add the required fields for candidate profile, contact links, job preferences, experience, scheduling, and consent details.

4. Organize the form into four distinct sections:

    - **Section A — Personal Details**
    - **Section B — Contact & Online Presence**
    - **Section C — Job & Experience Details**
    - **Section D — Interview Scheduling & Consent**
5. Configure mandatory field validations (marked with an asterisk *) for Candidate Name, Contact Number, Email Address, Department

6. Applied For, Employment Type Preferred, Years of Experience, Available Joining Date, and Background Verification Consent.
7. Save and access the preview mode to test the layout and field properties.

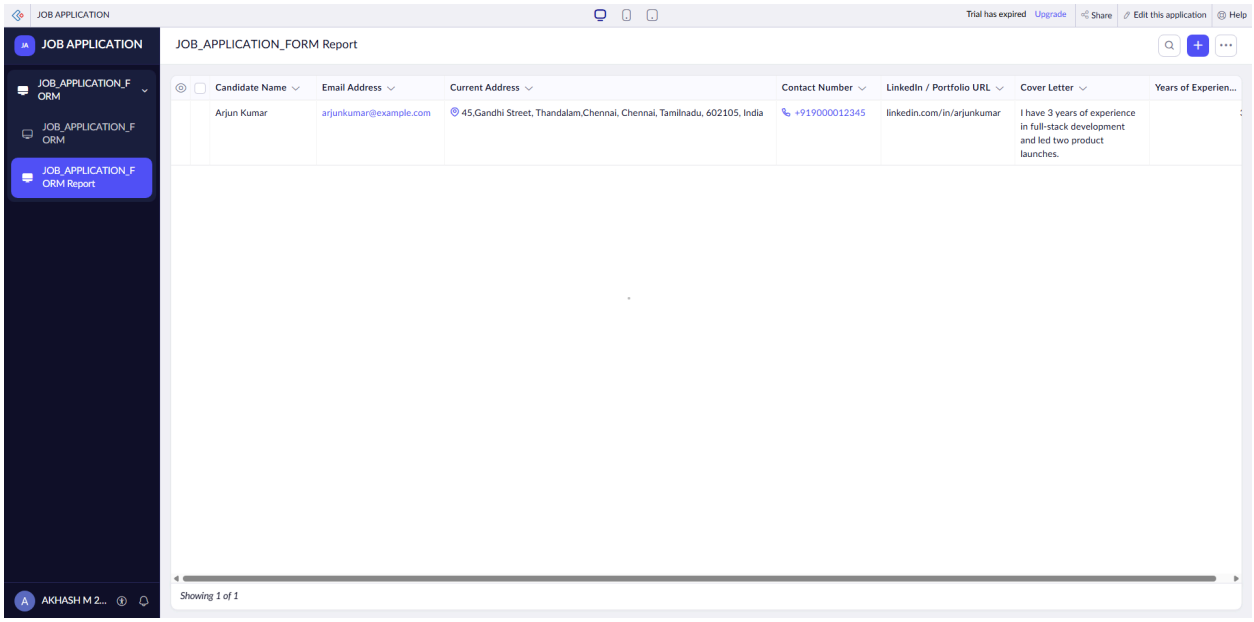

8. Enter sample candidate records across all sections and submit the form.

9. Create the **Job_Applications_Report** and verify the captured candidate submissions.

10. Apply report filters based on **Department Applied For**, **Employment Type Preferred**, and **Years of Experience** to short-list candidates for interview scheduling.

Result:

TheJob Application Form was successfully created in Zoho Creator with a structured data model, appropriate field validations, and organized sections. The submitted applications were successfully stored and displayed in the Job_Application_Report for effective review and pre-screening.
