TO CREATE - JOB APPLICATION COMMAND CENTRE

Aim

To design and develop a Job Application Command Centre using Zoho Creator to centralize job application management, monitor recruitment progress, track quarterly hiring targets, and assist HR personnel in managing candidate applications and interview activities efficiently.

Theory

Zoho Creator is a low-code application development platform used to create customized applications, forms, reports, dashboards, and automated workflows.

The Job Application Command Centre is designed to provide HR managers and recruiters with a centralized interface for monitoring and managing the recruitment process. It integrates various page elements through the Zoho Creator Page Builder to improve accessibility, organization, and efficiency.

The command centre consists of the following elements:

1. Panel: `Command_Center_Main_Panel` — acts as the main container for organizing the dashboard elements.
2. Gauge: `Quarterly_Hiring_Target_Gauge` — displays progress toward the quarterly hiring target, such as 12 out of 20 positions filled.
3. Chart: `Department_Applications_Chart_Widget` — visualizes job application counts by department.
4. Board: `Application_Status_Board` — organizes candidate applications into stages such as Applied, Screening, Interview, Offer, and Rejected.
5. Search: `Candidate_Search_Bar` — helps recruiters locate applications using candidate names, email addresses, or application IDs.
6. Form: `Quick_Referral_Intake_Form` — allows HR personnel to enter referred candidate details.
7. Report: `Full_Applications_Report` — displays application records for detailed review and analysis.
8. Button: `Send_Interview_Reminder_Button` — triggers interview reminder emails through a configured workflow.

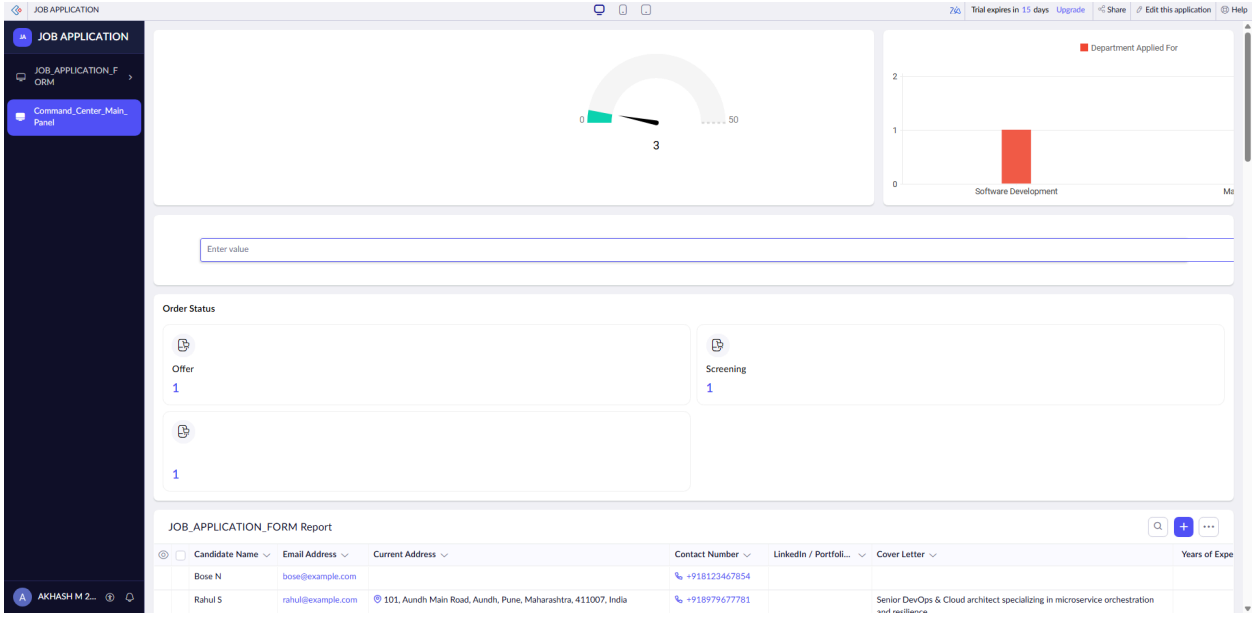

9. Snippets: `Interview_Evaluation_Criteria_Snippet` — displays reusable interview evaluation guidelines.
10. Widgets: `Interviewer_And_OpenPositions_Widgets` — presents supporting information about interviewer availability and open positions.
11. Viewer: `Resume_And_VideoResume_Viewer` — provides access to candidate resumes and video resumes, depending on the supported content types and configuration.

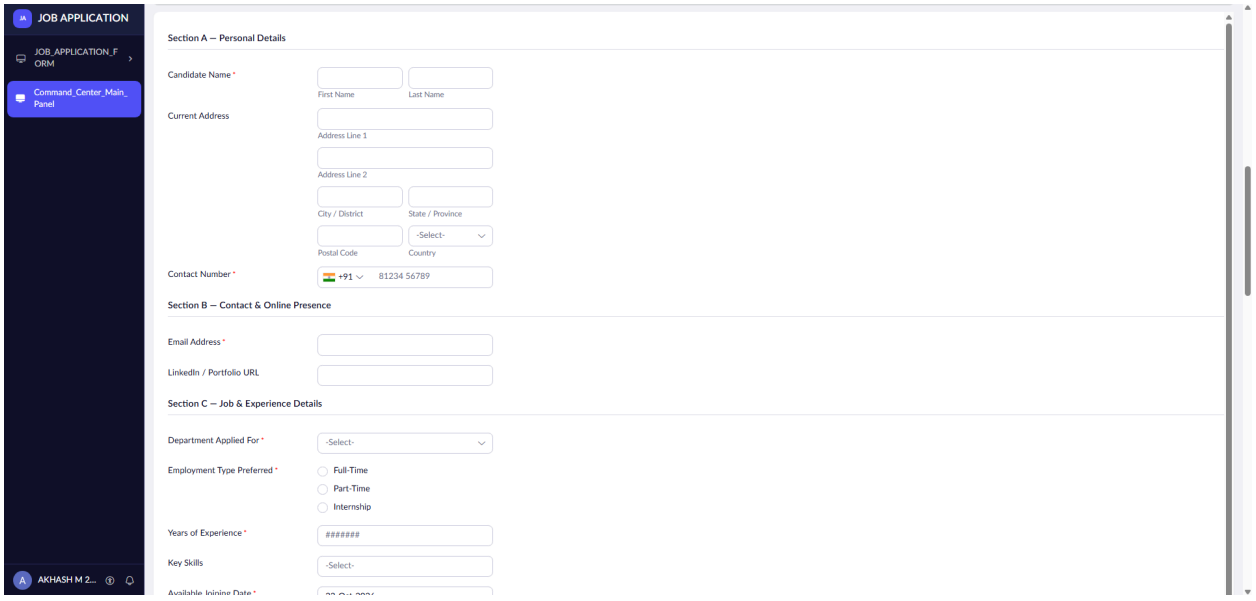

Together, these elements help HR personnel monitor application status, evaluate recruitment progress, and manage hiring activities from a single interface.

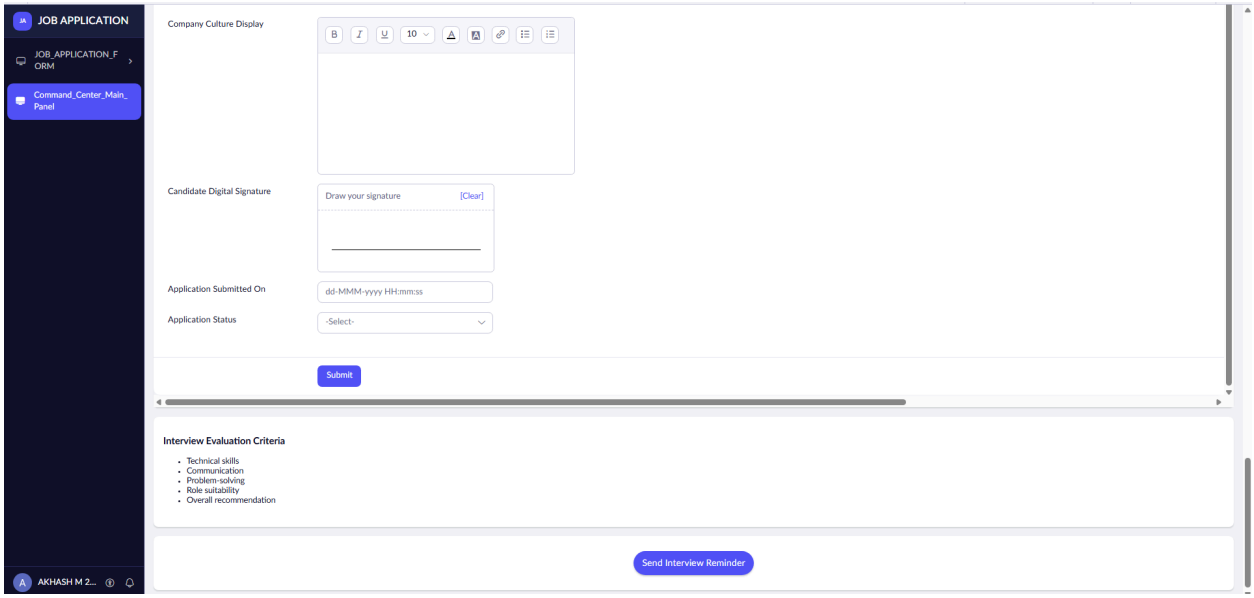

Procedure

1. Log in to Zoho Creator and open the Job Application application.
2. Navigate to the Page Builder and create or open the page named `Command_Center_Main_Panel`.
3. Add a Panel element to serve as the main container for the command centre.
4. Add a Gauge named `Quarterly_Hiring_Target_Gauge` and configure it to display the number of hired candidates against the quarterly hiring target.
5. Add a Chart named `Department_Applications_Chart_Widget` to display application counts by department.
6. Add a Board named `Application_Status_Board` and configure it to organize candidates according to their recruitment stages.
7. Add a Search element named `Candidate_Search_Bar` to enable quick searching of candidate applications.
8. Add a Form named `Quick_Referral_Intake_Form` to record employee-referred candidates.
9. Add a Report named `Full_Applications_Report` to display and review job application records.
10. Add a Button named `Send_Interview_Reminder_Button` and configure the appropriate workflow for sending interview reminder emails.
11. Add a Snippet named `Interview_Evaluation_Criteria_Snippet` containing the standard interview evaluation criteria.
12. Add a Widgets element named `Interviewer_And_OpenPositions_Widgets` to display interviewer availability and open-position information.
13. Add a Viewer named `Resume_And_VideoResume_Viewer` to provide access to candidate resumes and video resumes.
14. Arrange the elements according to the planned layout, positioning the hiring target gauge at the top-left and the department applications chart beside it.
15. Save the page and test the configured elements, data displays, and workflows to verify that the command centre functions correctly.

Result

The Job Application Command Centre was designed using Zoho Creator by integrating multiple page elements into a centralized recruitment management interface. The command centre supports monitoring quarterly hiring targets, visualizing department-wise applications, tracking candidate application stages, searching candidate records, managing referrals, reviewing application reports, and supporting interview activities.

Thus, the Job Application Command Centre provides an organized and accessible platform for HR personnel to monitor job applications and manage the recruitment process more efficiently.
