7.Integrating Zoho Creator with Zoho CRM via Connections and APIs

Aim

To establish a bi-directional, automated integration between Zoho Creator and Zoho CRM using OAuth connections and Deluge API integration functions (zoho.crm.createRecord, zoho.crm.updateRecord, and zoho.crm.searchRecords) to synchronize candidate lead records, update stage ratings, and dynamically query sales account managers.

Theory

Cross-platform enterprise workflows rely on real-time API sync to align recruitment operations in Zoho Creator with sales/contact management in Zoho CRM:

- OAuth 2.0 Authorization: Establishes secure communication channels using explicit scopes (ZohoCRM.modules.ALL or Zoho CRM V2) registered as named connection tokens.

- Lead Creation Trigger (On Success): On form submission, candidate properties (Name, Email, Application ID) map into JSON payloads to generate Lead records in CRM via zoho.crm.createRecord(), returning a unique CRM ID stored inside Creator's CRM_Lead_ID field.

- Lead Status Synchronization (On Edit): Changes in candidate lifecycle status (Screening, Interview, Hired, Rejected) dynamically update mapped fields in CRM (Lead_Status, Rating) using zoho.crm.updateRecord().
- Dynamic Search & Data Query (zoho.crm.searchRecords): Enables Creator to dynamically query active CRM entity records (such as Sales Account Managers) to populate UI drop-down choices on form load.

Procedure

1. Establish OAuth Connection:
    - Navigate to Microservices → Connections (or Application Settings → Connections).
    - Click + Add Connection, select Zoho CRM, set version to Zoho CRM V2, and name it Zoho_CRM_Conn.
    - Set Access Scope to All Actions (ZohoCRM.modules.ALL) and click Create And Authorize.
2. Add Lead Tracking Field:
    - Open JOB_APPLICATION_FORM in the Form Builder.
    - Add a Single Line field named CRM Lead ID (field link name: CRM_Lead_ID). Save the form.
3. Configure Candidate Lead Creation Sync (On Success):
    - Create a workflow on JOB_APPLICATION_FORM triggered on Created → On Success.
    - Add a Deluge Script action to construct the CRM payload and map the returned record ID:

Code Snippet:

```
leadData = Map();
leadData.put("First_Name", input.Candidate_Name);
leadData.put("Last_Name", "Candidate");
leadData.put("Email", input.Email_Address);
leadData.put("Lead_Source", "Zoho Creator Application");
leadData.put("Description", "Application ID: " + input.Application_ID);

response = zoho.crm.createRecord("Leads", leadData);

if(response.get("id") != null)
{
   input.CRM_Lead_ID = response.get("id").toString();
}
```

4. Configure CRM Lead Status Update Workflow (On Edit):

    - Create a workflow on JOB_APPLICATION_FORM triggered on Edited → Successful field update.
    - Add a Deluge Script action:

Code Snippet:

```
if(input.CRM_Lead_ID != null && input.CRM_Lead_ID != "")
{
   crmUpdateMap = Map();
   if(input.Application_Status == "Interview" || input.Application_Status ==
"Screening")
   {
      crmUpdateMap.put("Lead_Status", "In Contact");
      crmUpdateMap.put("Rating", "Warm");
   }
   else if(input.Application_Status == "Offer Approved" ||
input.Application_Status == "Hired")
   {
      crmUpdateMap.put("Lead_Status", "Pre-Qualified");
      crmUpdateMap.put("Rating", "Hot");
   }
   else if(input.Application_Status == "Rejected")
   {
      crmUpdateMap.put("Lead_Status", "Junk Lead");
      crmUpdateMap.put("Rating", "Cold");
   }

   updateResponse = zoho.crm.updateRecord("Leads",
input.CRM_Lead_ID.toLong(), crmUpdateMap);
}
```

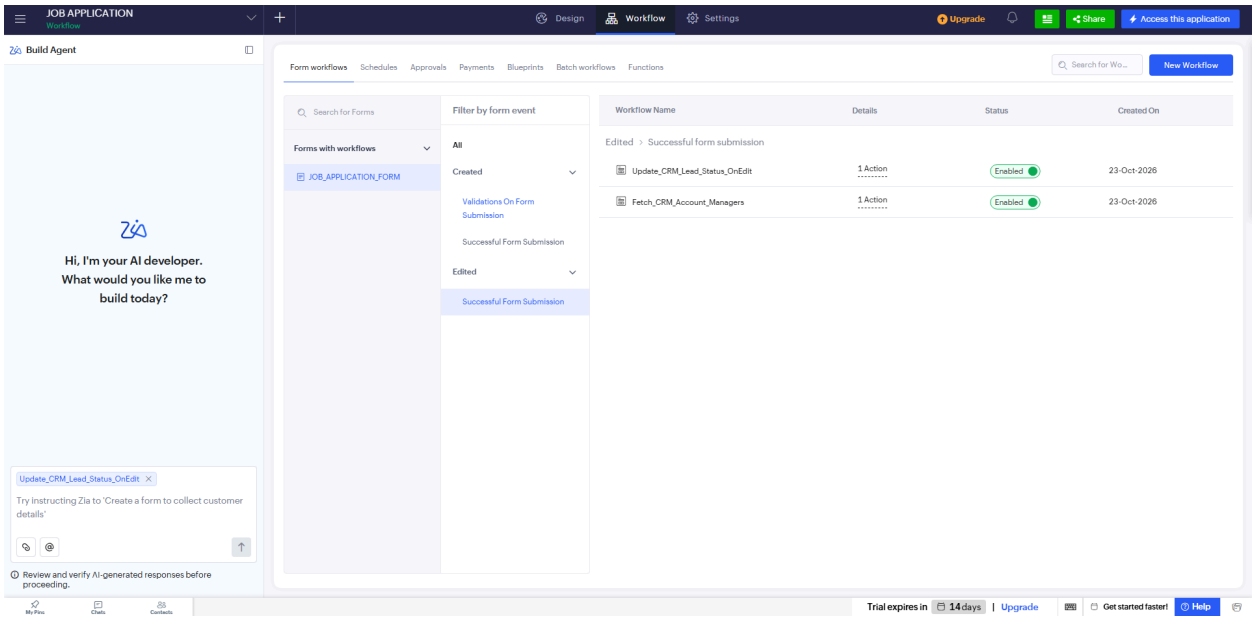

5. Dynamic Account Manager Search (On Load):
    - Configure an On Load workflow on Job Requisition (or JOB_APPLICATION_FORM) using zoho.crm.searchRecords("Users",

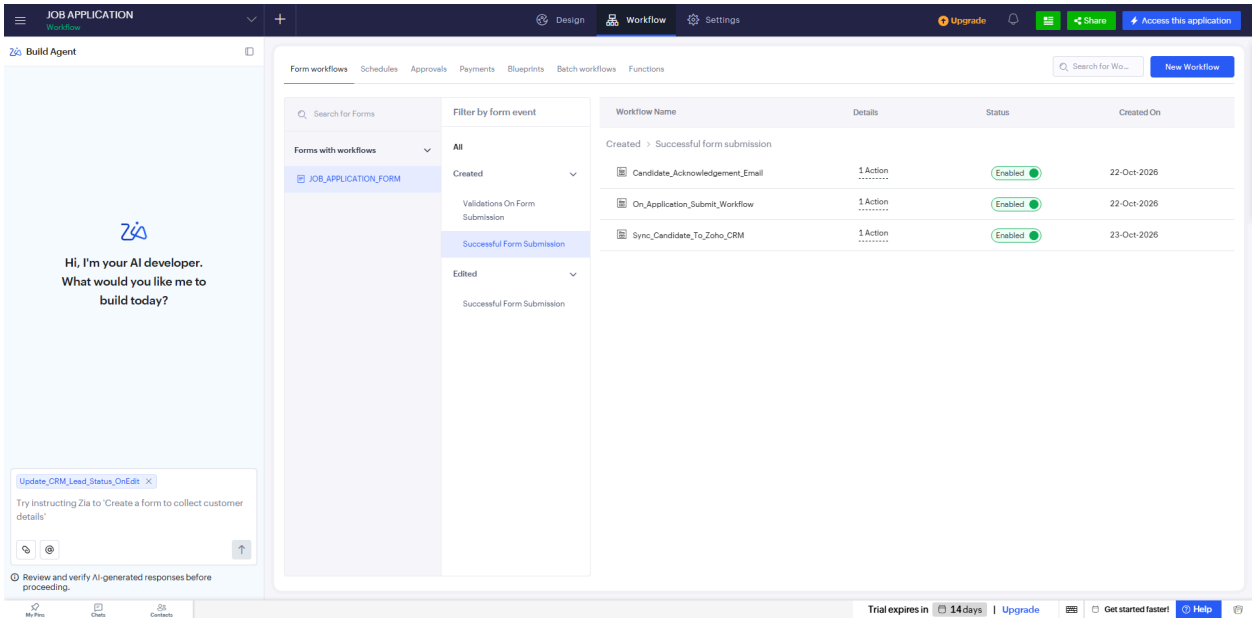

"(Role:equals:Sales Account Manager")" to fetch active CRM sales reps into form choices.

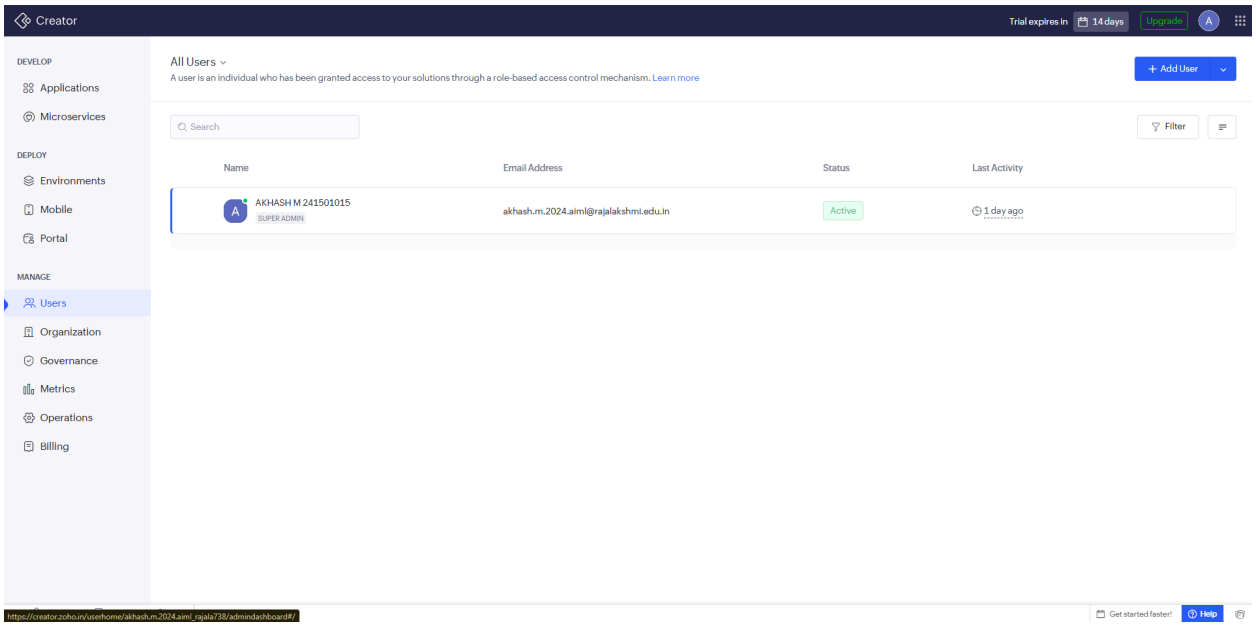

6. Integration Verification & Logging:

    - Submit a sample candidate entry via JOB_APPLICATION_FORM.
    - Open Zoho CRM → Leads module to verify instant record creation.
    - Open Zoho Creator → Setup → Logs → Executed Script Logs to verify standard HTTP 200/201 success responses statuses.

Result:

The bi-directional integration between Zoho Creator and Zoho CRM is successfully configured, deployed, and verified:

- Candidate applications submitted in Creator automatically instantiate corresponding Lead records inside Zoho CRM with linked CRM_Lead_ID values.
- Candidate stage edits in Creator update CRM Lead_Status and Rating fields in real time
- API execution logs confirm zero script runtime errors with successful HTTP status payloads.
