EXPERIMENT 9: EXPLORING AI FEATURES AND ZIA ANALYTICS IN ZOHO CREATOR

Aim

To implement AI-assisted features in Zoho Creator using Zia and Deluge for resume processing, skill extraction, interview feedback analysis, recruitment analytics, and role-based access control.

Theory

Zoho Creator integrates AI capabilities to automate data processing and improve recruitment decisions. Zia supports natural language queries and analytics, while Deluge workflows can process resume text, identify candidate skills, and analyze interview feedback. Role-based permissions help protect confidential candidate information and AI-generated scores.

Procedure

1. Open the existing Talent Acquisition System in Zoho Creator.
2. Configure the available Zia analytics features.
3. Add resume upload, extracted text, technical skills, and AI score fields.
4. Create workflows for resume processing and interview feedback analysis.
5. Configure permissions for restricted AI-related fields.
6. Develop Deluge scripts for text extraction, skill identification, and feedback classification.
7. Create dashboards to display recruitment statistics.
8. Test the workflows and verify access permissions.

Sample Deluge Scripts

1. Resume Processing

```
if(input.Resume_File != null)

{

   resumeText = zoho.creator.ai.extractText(input.Resume_File);
```

```
    input.Resume_Content = resumeText;

    skills = zoho.creator.ai.extractKeyPhrases(resumeText);
    input.Technical_Skills = skills.toString();
}
```

2. Interview Feedback Analysis

```
if(input.Evaluation_Comments != null)
{
    result = zoho.creator.ai.analyseSentiment(
        input.Evaluation_Comments
    );

    input.Feedback_Category = result.get("score");
}
```

3. Access Control

```
if(zoho.loginuser == zoho.adminuserid)
{
    info "Authorized to perform AI assessment.";
}
else
{
    alert "Access Denied.";
```

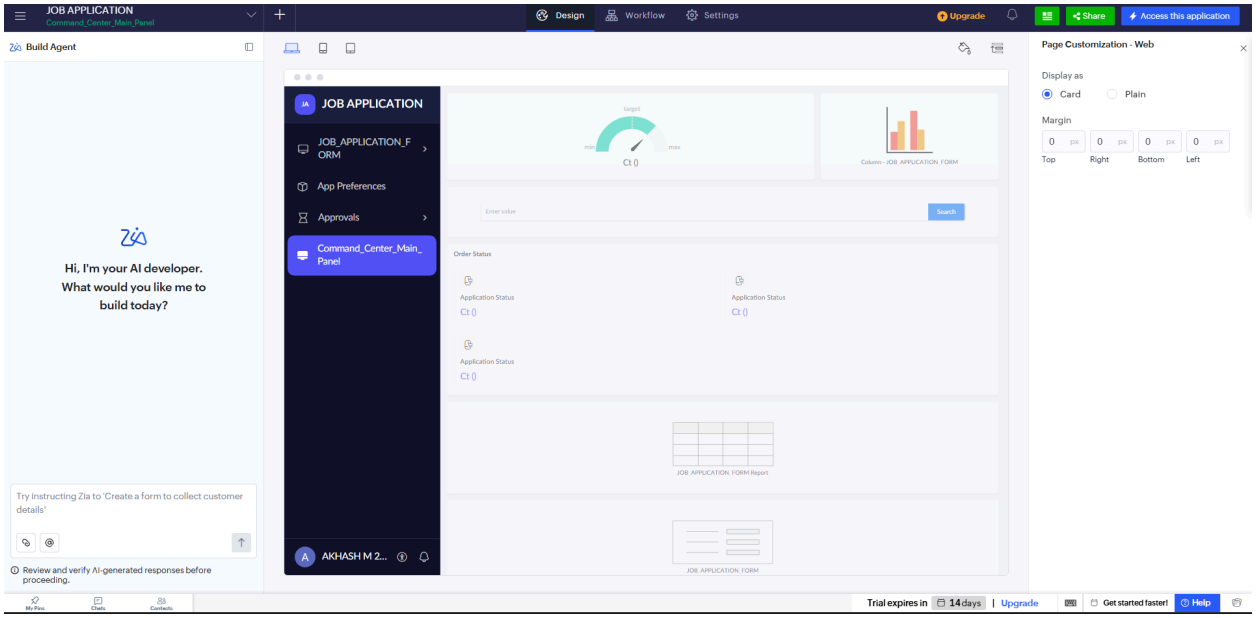

```
    cancel submit;
}
```

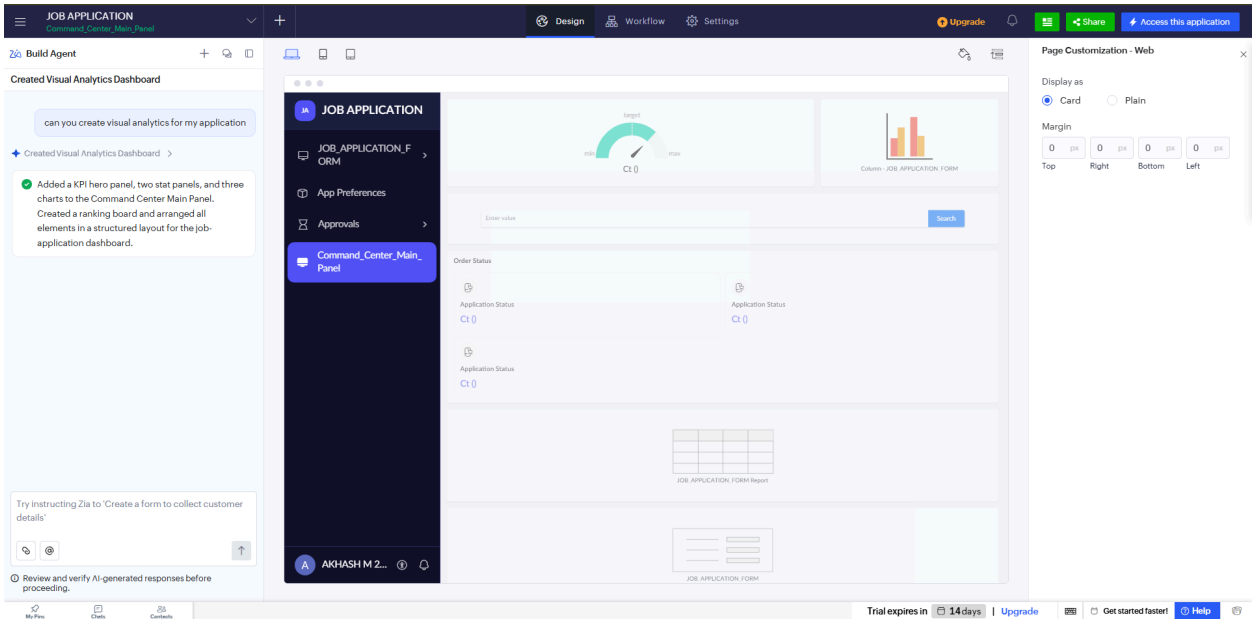

4. Candidate Filtering

```
eligibleCandidates = Candidate_Application
[
    Years_Of_Experience >= 3 &&
    Feedback_Category == "Positive"
];
info eligibleCandidates.count();
```

Note: Verify AI function names, parameters, and form field link names against the functions supported by your Zoho Creator environment.

Result

AI-assisted resume processing, feedback analysis, recruitment analytics, and access control were explored for the Zoho Creator Talent Acquisition System.
